Exceptional Drilling

Competitive Pricing

Our team has amassed over 40 years experience drilling in Nevada and across North America, from remote grassroots exploration projects to producing mine sites, and everything in between.

Our founders have spent their career on the other side of the drill contract - as geologists and mining executives. Frustrated with poor production and obscure pricing models that made it nearly impossible to stay on schedule or budget, the idea of DiamondBack Drilling was born. We strive to bring accountability, transparency and the highest safety standards to every job site.

INDUSTRY VETERANS

Eric Moore (*President*) is a founding member of the DiamondBack team with over 25 years of core drilling and foreman experience across the Western US. In his previous role as a field superintendent with Major Drilling, Eric regularly oversaw multiple job sites and crews at a time while working directly with some of the largest mining companies in the world.

Neal Clement (*Foreman*) has over 10 years of experience on a diamond core drill and prior to joining DiamondBack, spent considerable time in both Nevada and Alaska with Major Drilling. Neal has operated surface and heli-portable fly rigs across a broad range of drill models, operating conditions and specialized drilling techniques.

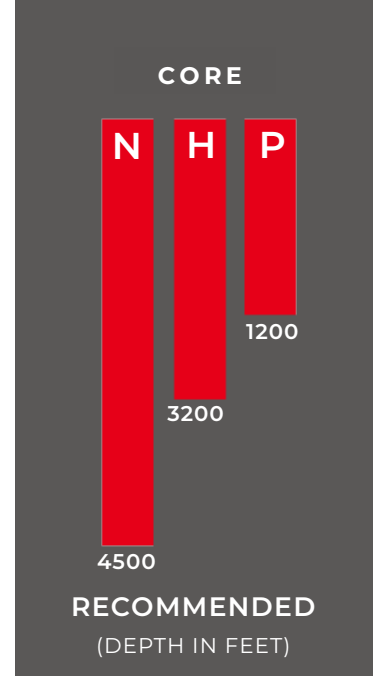

Brian Walker (*Foreman*) has spent over 18 years in the drilling industry starting as driller helper all the way to Major Drilling's Project Manager for the Barrick Gold Fourmile project where he oversaw the operation of up to ten drill rigs and associated crews. Brian has extensive experience in the United States, Canada and Africa.
